Overview
The purpose of this document is to describe the guidelines Mass General Brigham Health Plan utilizes to determine the medical appropriateness for autologous chondrocyte implantation (ACI) for repairing cartilage defects of the knee. Mass General Brigham Health Plan will consider FDA-approved matrix-induced chondrocyte implantation (MACI) under the conditions listed in the coverage guidelines below. The treating specialist must request prior authorization for this procedure.

Coverage Guidelines
Mass General Brigham Health Plan covers autologous chondrocyte implantation under the following conditions and when all of the following are met:

- Member is age 15–55 years of age; (If an adolescent member is evaluated, the member should be 15 years of age or older on the date of service and skeletally mature with documented closure of growth plates).
- When symptoms of knee pain interfere with activities of daily living and have persisted for at least six months
- Single or multiple full-thickness cartilage defects each measuring greater than or equal to 2.0 cm²
- Cartilage defect involves the weight bearing areas of the femoral condyle (medial, lateral, or trochlear) or the patella based on documentation from prior arthroscopic procedures
- Femoral condyle defects are the result of acute or repetitive trauma
- Prior conservative treatment including physical therapy, nonsteroidal medications, and steroid injections have failed to offer relief
- Member must be willing to comply with a vigorous rehabilitation program post ACI procedure.

Instability of the knee may adversely affect the success of the procedure and should be corrected. The anterior and posterior cruciate ligaments should be free of laxity as well as stable and intact. It is recommended that cruciate deficiencies be corrected. Abnormal weight-distribution within the joint may adversely affect the success of the procedure and should be corrected. The tibial/femoral joint should be properly aligned.

Exclusions
Mass General Brigham Health Plan does not provide coverage for:
1. Joints other than the knee
2. Active infection of the knee
3. Presence of osteoarthritis

Medicare Variation
Mass General Brigham Health Plan uses guidance from the Centers for Medicare and Medicaid Services (CMS) for coverage determinations for its Medicare Advantage plan members. National Coverage Determinations (NCDs), Local Coverage Determinations (LCDs), Local Coverage Articles (LCAs) and documentation included in
the Medicare manuals are the basis for coverage determinations. When there is no guidance from CMS for the requested service, Mass General Brigham Health Plan’s medical policies are used for coverage determinations.

Definitions

Autologous chondrocyte implantation: a two-step procedure in which new cartilage cells are grown and then implanted in the cartilage defect. Healthy cartilage tissue is first removed from a non-weight bearing area of the bone and sent to a laboratory. The cells are cultured and increase in number over a 3- to 5-week period and are then transplanted back via a second procedure.

Full thickness chondral defects are those that extend through to the subchondral bone.

Matrix-induced Autologous Chondrocyte Implantation (MACI): MACI is autologous cultured chondrocytes on porcine collagen membrane. It is an autologous cellularized scaffold product that is indicated for the repair of single or multiple symptomatic, full-thickness cartilage defects of the adult knee, with or without bone involvement.

Codes

The following codes are included below for informational purposes only; inclusion of a code does not constitute or imply coverage.

This list of codes applies to commercial and MassHealth plans only.

Effective

August 2023: Annual update. Medicare Advantage added to table. Minor editorial refinement to coverage guidelines; intent unchanged. Medicare Variation language added.
August 2022: Annual update. References updated.
August 2021: Annual update. Revised language under Coverage Guidelines to state “Single or multiple full-thickness cartilage each measuring greater than or equal to 2.0 cm²”. References updated.
July 2019: Annual update. Revised language under Overview section to reflect policy only allows for MACI. Removed Carticel. Revised Coverage guidelines. Allow for up to age 55. Removed requirement that member have inadequate response to prior surgical treatment. Under Exclusion section; removed defects of the patella. Updated Code and References.
June 2018: Annual update.
December 2017: Effective date. Codes added.
