

Akorn Pharmaceuticals recall

On April 26, 2023, Akorn Pharmaceuticals issued a recall of all lots of various non-expired products manufactured by the company.

The recall was issued due to Akorn ceasing all operations and discontinuing its Quality program. The discontinuation of the Quality program means the company will not be able to guarantee that the products will meet all intended specifications through the labeled shelf life of the product.

What do you need to do?

You should discontinue using any Akorn-manufactured products you have and speak to your provider or pharmacist about switching to a different manufacturer.

You should also discard any remaining amounts of Akorn-manufactured products that you have in your possession.

You can learn more information or report any adverse events or quality problems experienced with the use of this product through Akorn directly, or you can report to the FDA's MedWatch Program.

Manufacturer Information

Akorn Drug Safety (To report adverse events):
