Overview

Livmarli (maralixibat) is an ileal bile acid transporter (IBAT) inhibitor indicated for the treatment of:

- Cholestatic pruritus in patients with Alagille syndrome (ALGS) 3 months of age and older
- Cholestatic pruritus in patients 12 months of age and older with progressive intrahepatic cholestasis (PFIC)

Livmarli is not recommended in a subgroup of PFIC type 2 patients with specific ABCB11 variants resulting in non-functional or complete absence of bile salt export pump (BSEP) protein.

Coverage Guidelines

Authorization may be reviewed for members new to the plan within the past 90 days who are currently receiving treatment with the requested medication, excluding when the product is obtained as samples or via manufacturer's patient assistance programs

OR

Authorization may be granted if the member meets all following criteria:

Progressive Familial Intrahepatic Cholestasis (PFIC)

1. Member has a diagnosis of progressive familial intrahepatic cholestasis (PFIC)
2. Genetic testing does not indicate PFIC type 2 with ABCB11 variants encoding for nonfunction or absence of bile salt export pump protein (BSEP-3)
3. Member is 12 months of age or older
4. Requested medication is being prescribed by or in consultation with a hepatologist, gastroenterologist or a provider who specializes in PFIC
5. Member has pruritus
6. Member has had an inadequate response, adverse reaction, or contraindication to at least ONE of the following:
 - a. Ursodiol (UDCA)
 - b. Antihistamine

- c. Rifampin
- d. Cholestyramine
- e. Sertraline
- f. Naltrexone

Cholestatic Pruritus in Alagille Syndrome (ALGS)

1. The member has a diagnosis of Alagille syndrome (ALGS) confirmed by ONE of the following:
 - a. Documentation of genetic testing confirming mutations of the JAG1 or NOTCH2 genes
 - b. Bile duct paucity
 - c. THREE of the five major clinical features of ALGS:
 - i. Cholestasis
 - ii. Cardiac defect (e.g., stenosis of the peripheral pulmonary artery and its branches)
 - iii. Skeletal abnormality (e.g., butterfly vertebrae)
 - iv. Ophthalmologic abnormality (e.g., posterior embryotoxon)
 - v. Characteristic facial features (e.g., triangular-shaped face with a broad forehead and a pointed chin, bulbous tip of the nose, deeply set eyes, and hypertelorism)
2. Member is 3 months of age or older
3. Requested medication is prescribed by or in consultation with a hepatologist, gastroenterologist, or provider who specializes in treatment of Alagille Syndrome
4. Member has pruritus
5. Member has had an inadequate response, adverse reaction, or contraindication to at least ONE of the following:
 - a. Ursodiol (UDCA)
 - b. Antihistamine
 - c. Rifampin
 - d. Cholestyramine
 - e. Sertraline
 - f. Naltrexone

Continuation of Therapy

Requests for reauthorization will be approved when the following criteria are met:

1. Prescriber submits documentation of positive clinical response as evidenced by improvement in severity of pruritus.

Limitations

1. Initial approvals and reauthorizations will be granted for 12 months
2. The following quantity limits apply:

Drug Name and Dosage Form	Quantity Limit
Livmarli 9.5mg/mL oral solution	3 mL per day
Livmarli 10 mg, 20 mg tablet	2 tablets per day
Livmarli 30 mg tablet	1 tablet per day

Review History

03/16/2022 – Created for March P&T Effective 05/01/2022.

12/11/2024 – Reviewed and updated for December P&T. Added approval criteria for supplemental indication of PFIC. Updated criteria for Alagille syndrome to allow for approval if the member has had genetic testing. Updated approvable age to 3 months or older. Added requirement for specialist prescriber and step through with one alternative agent. Removed requirements that the member cannot have a history of liver transplant or concomitant liver disease. Effective 3/1/2025.

02/12/2025 – Reviewed and updated for February P&T. Updated initial approval to 12 months. Effective 3/1/2025.

07/11/2025 – Reviewed and updated for July P&T. Added Livmarli oral tablet to the policy. Effective 10/1/2025.
