Overview

Restasis is a topical immunomodulator indicated to increase tear production in patients whose tear production is presumed to be suppressed due to ocular inflammation associated with keratoconjunctivitis sicca. Increased tear production was not seen in patients currently taking topical anti-inflammatory drugs or using punctal plugs.

Coverage Guidelines

Authorization may be granted for members who are new to the plan currently receiving treatment with requested medication excluding when the product is obtained as samples or via manufacturer's patient assistance programs.

OR

Authorization will be granted when all the following criteria has been met, and documentation has been submitted:

1. The requested drug is being prescribed for dry eye disease
2. Patient has tried and failed or been intolerant to artificial tears products
3. **ONE** of the following:
 - a. Patient will not be using ophthalmic anti-inflammatory drugs concurrently with the requested drug
 - b. Patient will be using ophthalmic anti-inflammatory drugs concurrently with the requested drug
4. The ophthalmic anti-inflammatory drugs will be used concurrently for a short period (2 to 4 weeks) while transitioning to monotherapy with the requested drug

Continuation of Therapy

Reauthorization requires physician attestation that member demonstrates a positive response to therapy.

Limitations

1. Initial approvals and reauthorizations will be granted for 12 months.
