## Overview

Ryplazim is plasma-derived human plasminogen indicated for the treatment of patients with plasminogen deficiency type 1 (hypoplasminogenemia).

# **Coverage Guidelines**

**Exceptions** 

Authorization may be reviewed for members new to the plan who are currently receiving treatment with requested medication excluding when the product is obtained as samples or via manufacturer's patient assistance programs.

#### OR

Authorization may be granted for members when all the following criteria are met, and documentation is provided:

- 1. Member has a diagnosis plasminogen deficiency type 1 (hypoplasminogenemia)
- 2. Provider documentation of baseline plasminogen activity level of 45% or less
- 3. Documented history of lesions and symptoms consistent with a diagnosis plasminogen deficiency type 1 (e.g., ligneous conjunctivitis, ligneous gingivitis or gingival overgrowth, vision abnormalities, respiratory distress and/or obstruction, abnormal wound healing).

## **Continuation of Therapy**

Reauthorization will be granted for plasminogen deficiency type 1 (hypoplasminogenemia) and provider documents benefit from therapy as evidenced by disease stability or disease improvement (e.g., improvement in lesion number and/or size, absence of new lesion development, improvement in respiratory function, increased quality of life).

### Limitations

1. Initial approvals and reauthorizations will be granted for 12 months.

## **Review History**

09/21/2022 – Reviewed and created for Sept P&T. Effective 11/01/2022
