Notes	Evenity is also available on the pharmacy benefit. Please see the MassHealth Drug List for coverage and criteria. Additional agents from this class are available through the pharmacy benefit. Please see the MassHealth Drug List for coverage and criteria.		

Overview

Evenity is indicated for the treatment of osteoporosis in postmenopausal women at high risk for fracture, defined as a history of osteoporotic fracture, or multiple risk factors for fracture; or patients who have failed or are intolerant to other available osteoporosis therapy.

Coverage Guidelines

Authorization may be reviewed on a case by case basis for members who are new to the plan currently receiving treatment with requested medication excluding when the product is obtained as samples or via manufacturer's patient assistance programs.

OR

Authorization may be granted for members when all the following criteria are met, and documentation is provided:

Treatment/prevention of osteoporosis

Prescriber provides **medical records** documenting **ALL** of the following:

1. Indication of treatment or prevention of postmenopausal osteoporosis in women
2. Bone mineral density (BMD) indicating osteoporosis (T score ≤ -2.5)
3. **ONE** of the following:
 - a. Inadequate response to an adequate trial or adverse reaction to **ONE** oral bisphosphonate (see appendix for details)
 - b. Contraindication to **ALL** oral bisphosphonates (see appendix for details)
 - c. Member is at very high risk for fracture indicated by at least **ONE** of the following:
 - i. History of fracture within the past 12 months
 - ii. History of fractures while on osteoporosis therapy
 - iii. History of multiple fractures

- iv. History of fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids)
 - v. T-score less than -3.0
 - vi. High risk for falls
 - vii. History of injurious falls
 - viii. Very high fracture probability by FRAX® (fracture risk assessment tool) or other validated fracture risk algorithm
4. **ONE** of the following:
- a. Inadequate response to an adequate trial or adverse reaction with **ONE** or contraindication to **ALL** of the following:
 - i. ibandronate injection
 - ii. Prolia® (denosumab)
 - iii. zoledronic acid 5 mg
 - b. Diagnosis of severe osteoporosis defined as at least **ONE** of the following:
 - i. History of fragility fracture within the past 12 months
 - ii. History of fractures while on osteoporosis therapy
 - iii. T-score less than -3.0
 - iv. T-score of -2.5 or below plus a fragility fracture
5. Inadequate response, adverse reaction, or contraindication to Forteo® (teriparatide)

Continuation of Therapy

Recertification of Evenity (romosozumab-aqqg) may only be issued for members who have not completed 12 months of treatment. The total treatment duration **should not exceed 12 months**.

Limitations

Approvals are limited to a maximum of 12 months of therapy.

Appendices

Appendix A: WHO Fracture Risk Assessment Tool

- High FRAX fracture probability: 10 year major osteoporotic fracture risk $\geq 20\%$ or hip fracture risk $\geq 3\%$.
- 10-year probability; calculation tool available at: <https://www.sheffield.ac.uk/FRAX/>
- The estimated risk score generated with FRAX should be multiplied by 1.15 for major osteoporotic fracture and 1.2 for hip fracture if glucocorticoid treatment is greater than 7.5 mg per day.

Appendix B: Clinical reasons to avoid oral bisphosphonate therapy

- Esophageal abnormality that delays emptying such as stricture of achalasia
- Active upper gastrointestinal problem (e.g., dysphagia, gastritis, duodenitis, erosive esophagitis, ulcers)
- Inability to stand or sit upright for at least 30 to 60 minutes
- Inability to take at least 30 to 60 minutes before first food, drink, or medication of the day
- Renal insufficiency (creatinine clearance <35 mL/min)
- History of intolerance to an oral bisphosphonate
